Summary

Third-year Software Engineering student at the University of Canterbury. I'm looking for a summer internship to improve my skills within the software engineering industry. I'm experienced in full-stack development, CI/CD automation. Skilled in the software development lifecycle (SDLC), including design, implementation, testing, and deployment. Experienced in building collaborative, data-driven applications, integrating RESTful APIs (backend and frontend), and using git for agile team collaboration. Passionate about scalable software design, efficient development workflows, and continuous improvement through peer review and automation.

Skills

Python, Java, JavaScript, TypeScript, C, C#, C++, React, Svelte, Bootstrap, Tailwind, HTML, CSS, SQL, Docker, CI/CD

Awards

Hiranga Scholarship 2024
Awarded to top achieving students top-achieving students commencing an undergraduate degree.

Education

University of Canterbury Feb 2024 - Current
BE(Hons) in Software Engineering - 3rd Year
Scots College - International Baccalaureate Diploma Programme 2023

Work Experience

Retail Assistant (Casual), 2025 – Current

Referee: Available upon request

Projects

Chess Bot (C#, React)

- Built a full-stack chess platform (React/TypeScript frontend, C#/.NET backend) integrating multiple AI opponents, including a custom-built chess engine compiled to WebAssembly and Stockfish via Web Workers
- The Bot runs using .NET WASM in dedicated Web Workers, improving perceived load time with background preloading
- Hosted on a Raspberry Pi and securely exposed to the internet through a Cloudflare-managed reverse tunnel

TakeAHike! (JavaFX, SQL, ArcGIS API)

- Engineered an interactive hiking app integrating real-time elevation data, map filtering, and translation services using ArcGIS API.
- Optimized and structured a SQL database for fast data retrieval.
- Designed an engaging, kid-friendly UI to explore NZ hiking trails.

Two-Player Pong (C, Embedded Systems, IR Communication)

- Programmed a real-time multiplayer Pong game on microcontrollers using infrared communication with encoded data packets.
- Configured GPIO pins to render graphics and ensure <5ms latency between devices sync timers.

Extracurriculars

Chess Club	Feb 2024 – Current
CompSoc	Feb 2025 – Current
Indian Society	Feb 2025 – Current
